The efforts of the Rockefeller Foundation (RF) to aid promising scholars fleeing the spread of fascism in Europe in the 1930s and 1940s have been well documented by scholars who have made use of the materials at the Rockefeller Archive Center. Less explored is the story of how these scholars' ideas and thoughts were transplanted into the American soil through the personal and intellectual networks formed between refugee scholars and American intellectuals.

The main objective of my present study is to take a fresh look at the postwar era, during which the RF continued to support various projects of former refugee scholars through its grant-giving activities. My tentative conclusion is that the RF played an important role in not only rebuilding intellectual ties across the Atlantic after the Second World War, but also in assisting the intricate process of the transmission and hybridization of ideas by serving as a kind of catalyst between refugee scholars and American intellectuals.

The fact that this process took place amid the politically volatile milieu under the shadow of the Cold War and McCarthyism adds yet another layer to the story, namely cultural politics intertwined with the development of new ideas and disciplines. With this objective in mind, I focused on several RF-assisted projects of the 1950s in the social sciences and the humanities.

Before discussing these specific projects, a brief look at the RF's change in policy toward refugee intellectuals amid an increasing concern with national security will serve as a good starting point.

## **1) The Cold War and the RF's postwar policy toward refugee scholars**

Although political instabilities in Czechoslovakia, Poland, and Hungary brought a new wave of refugee intellectuals to American shores in the postwar era, the Rockefeller Foundation did not launch another major "refugee scholar program" comparable to its wartime program. Thomas B. Appleget, vice president of the RF from 1927 to 1949, stated in his 1946 report that the RF's program for refugee scholars "began in 1933 and ended in 1945." He reviewed the RF's successful humanitarian efforts to save displaced European scholars, many of whom "have taken root in this country and are flourishing in the new soil." <sup>1</sup>

However, after 1945 the RF was more cautious in choosing refugee scholars as grantees and

fellows. In an officers' conference held in 1948, Joseph H. Willits, Director of the Social Science Division, recommended that the RF "refrain from any revival of [the] refugee scholar program, with one exception, i.e., East Asian and Slavic Studies, in which areas it is difficult to find mature scholars familiar with language and culture."<sup>2</sup>

Furthermore, their April 6-7, 1948 discussion of RF programs in Europe emphasized "the importance of avoiding projects that might conceivably be used to injure the United States and countries friendly to it."<sup>3</sup> Yet, the RF's seemingly defensive stance on the issue of national security was at this point still tempered by its universalistic concern, as RF president Raymond Fosdick wrote to Warren Weaver, Director of the Division of Natural Sciences and Agriculture: "I am anxious to maintain as far as possible the principle on which the Foundation has always acted-i.e., that our assistance is given without regard for race, creed, color, or political opinion."<sup>4</sup>

By the early 1950s, the RF's stance toward national security is firmer and less ambivalent, as RF vice president Lindsley F. Kimball indicates in his report:

The people of the US are facing a new situation under the sun. . . . Now our enemy is insidious. He is international. The RF can't live in isolation from the enigma of the times. The Senate and FBI investigation of the Institute of Pacific Relations [an RF grant recipient] and the charges proffered by Representative Cox indicate the belief in at least a few minds, that the RF is either unwittingly giving support to the enemies of our country or is itself fuzzy-minded, unrealistic, and even pinkishly inclined.<sup>5</sup>

In his extended exploration of the subject, Kimball mentions the name of Hans Eisler, a German émigré who was awarded a RF fellowship in music in 1940. "Knowing what we now know," Kimball tells us, "we would not today award this fellowship." Reminding the readers of the drastically altered situation between then and now, he further presses his point:

At the time it was done, musical competency and creative ability were the only criteria, and it is probable that as of that date the fellowship would still have been awarded even though the communist background were known. It was not then significant. Today it is.<sup>6</sup>

Kimball's report is an interesting document, one that preaches "a moral responsibility to stand between the extremes," of living "within the limits of public tolerance" and avoiding "the breakdown of public confidence." "To enter any controversial area is risky," he cautioned, before boldly and contradictorily proclaiming that "we are prepared to accept risk rather than restrict our activities to wholly safe areas."<sup>7</sup>

Throughout the early 1950s, the question of whether the RF should make grants to support "a scientist who was once denied a visa" or to a "socialist" or to support the "un-American" or "subversive" ideas of those behind "the iron curtain" became a constant subject of the RF's internal correspondence.<sup>8</sup> Dean Rusk states the RF's position more bluntly in his letter to Dr. Robert B. Watson of Harvard: "We are not prepared to take a risk that the communist may also be a good scientist or scholar whose work, if shared, would be of general benefit to science or scholarship."<sup>9</sup> At the same time, not all RF officers shared Rusk's unambiguous anti-communist stance.

In a memorandum to Rusk, Willits ponders the advisability of the foundation becoming too

cautious and conservative in its grant-giving activities. Using a biological metaphor, he presents a unique notion of how the RF could contribute to the production of new ideas by encouraging the process of cross fertilization:

Biologists have long sought for and welcomed "mutants," on the ground that some of those variants may contain the genes which will point the desirable evolution of the future. It is of prime importance, especially in the social and humanistic fields, that the policies of the RF should not be such as to discourage interest in and encouragement of intellectual mutants in the social field.<sup>10</sup>

If Willits' argument might be partly based on the progressive outlook and evolutionary scientism which seem to have dominated the minds of many RF officers, his pronouncement also may be interpreted in the context of cold war rhetoric: the dichotomy between the totalitarian suppression of ideas and the open exchange of ideas in "free" countries. Thus he writes:

By preventing adventuring, and insisting on an official line, totalitarian societies shut themselves off from a rich crop of new ideas and one of the basic sources of growth. In combating communism, it is important that the Western World-and the RF as one of its best intellectual symbols-should not encourage the impoverishment of the stream of new ideas.<sup>11</sup>

Interestingly, Willits tried to emphasize that he is still fighting communism by being open to new ideas. Amid the politically charged climate of the 1950s, scientific-sounding biological metaphors such as "mutant," "variant," "crop," and "growth" had to be seasoned with the right amount of anti-communism in order to be acceptable to a more politically-minded man like Dean Rusk.

The challenge for Willits and other RF officers was whether and how they could help individual scholars grow and develop amid both a relatively hostile atmosphere to intellectuals as well as mounting anxieties on the part of its president and trustees. Until April 15, 1957, the RF staff routinely checked the official indices of government investigations to determine whether individuals involved in prospective RF grants and appointments were suspected of being communists.<sup>12</sup> In the case of Polish recipients of fellowships under the Science Program, they were put under surveillance during their stay in the U.S. The RF constantly sought the advice of State Department officials about the proper procedure to follow.<sup>13</sup>

In this general atmosphere of caution and guardedness, the experiment of transplanting the foreign-born ideas of refugee scholars into American soil was conducted in a piece-meal fashion. Willits' and other officers' interest in creating intellectual mutants -- better intellectual crops born out of cross-fertilization -- was intermingled with their cold-war agenda of discovering and nurturing talents serviceable to the national interest of the U.S. or the survival of the "western world." What follows are a few examples of their mixed legacy under the shadow of the cold war.

## **2) Projects/grants and their implications**

### **A. RF support of the Congress for Cultural Freedom (CCF)**

The participants in the five conferences sponsored by the Congress for Cultural Freedom between 1950 and 1955 in Berlin, Paris, Hamburg, Rome, and Milan included refugee intellectuals such as Franz Neumann, Michael Polanyi, Hanna Arendt and Nicola Chiaromonte,

as well as such New York intellectuals like Mary McCarthy, Dwight Macdonald and Sidney Hook. Nicholas Nabokov, an émigré composer and conductor from Russia and secretary-general of the CCF, turned to foundations for financial support. The RF was one of the first potential funders to be approached. Michael Polanyi, a Hungarian physical chemist who earned his reputation at the Kaiser Wilhelm Institute and after Hitler's rise moved to the University of Manchester as a professor of sociology, served as the chairman of the committee of science and freedom within the CCF.<sup>14</sup> This committee's main goal was to fight against the suppression of academic freedom in communist regimes and it had little to do with science itself, but the task of dealing with Polanyi and his committee fell to the RF's Natural Sciences and Agriculture Division and its director, Warren Weaver.

In 1953 the RF made a grant of \$10,000 to the CCF for the expenses of an international conference on "Science and Freedom" held in Hamburg in the summer of 1953.<sup>15</sup> In his diary, Warren Weaver described Nabokov as "a Russian who has recently become an American citizen" and quoted him saying that there is "the problem of trying to convince the people in Europe, and particularly the intellectuals, that McCarthy does not in fact represent a large and important segment of American society." According to Nabokov and another luncheon guest from the CCF, "what they want to talk about [in the conference] are the constructive activities in which they can all join to combat communism."<sup>16</sup> After the Hamburg conference, the CCF again asked for the RF's assistance in publishing a pamphlet that "would show that dialectical materialism is not the method through which science progresses nor is communism a scientific solution to social problems, as soviet propaganda pretends."<sup>17</sup>

The CCF recommended Sidney Hook to write such a pamphlet. Hook, a professor of philosophy at New York University, began his academic career as a Marxist in the late 1920s and became a fanatical anticommunist in the 1950s. When Weaver received this recommendation, he sought the advice of Bertrand Russell. The distinguished British mathematician and philosopher expressed his misgivings about Hook by saying that he "has seemed to be somehow infected by the witch-hunting spirit which is now very prevalent." He also questioned the nature of the "Freedom" that the CCF was promoting, noting that "I have recently resigned from the Congress for Cultural Freedom because I thought its pursuit of freedom not sufficiently comprehensive."<sup>18</sup>

Hook, for his part, told Chadbourne Gilpatric, a RF officer, that he "has been increasingly disturbed by the naiveté and gullibility of European scientists" who are "drawn to dialectical materialism and communism." Gilpatric was worried that the proposed pamphlet "might appear propagandistic if funds for its publication were to come from the RF." He cautioned Hook that "the final answer of officers and trustees might be in the negative."<sup>19</sup>

In the fall the routine security check of the members of the CCF was undertaken and Weaver noted "confusing aspects of two organizations,"<sup>20</sup> namely the American Congress [Committee] for Cultural Freedom and the international organization. Dean Rusk wrote to the Secretary of State, John Foster Dulles, to ask "whether the Department of State considered that such modest support [of the CCF] by us was in the public interest."<sup>21</sup> A subsequent internal memorandum reported that "on the basis of a letter which Mr. Rusk has received from the Department of State, the officers are now prepared to release to the Congress for Cultural Freedom the entire sum of

\$12,000 toward support of the program of its science and freedom."<sup>22</sup>

The next day Nabokov was informed of the grant of \$12,000, from which "\$6000 would be used to finance the preparation and publication in three languages of the brochure on dialectical materialism."<sup>23</sup> Such an instant communication was possible only because of the RF's special relationship with the State Department after former RF trustee John Foster Dulles was appointed Secretary of State in January 1953. Rusk, the RF's president from 1952 to 1961, later became the Secretary of State in the Kennedy Administration.

In 1956, the RF made another small grant to the CCF's committee on science and freedom toward the travel expenses of three delegates invited to participate in a Study Group on Academic Freedom to be held in Europe during the summer of 1956. The delegates included Sidney Hook along with a Chilean scholar and an Australian scholar.<sup>24</sup> By the spring of 1957, however, RF officers started to have increasing doubts about further supporting the CCF's science and freedom committee's activities, which included sending a protest statement to the governments of the USSR and Hungary and trying to hold a "conference of Polish economists at Manchester."<sup>25</sup>

In internal RF correspondence, one officer identified only as "RSM" showed his skepticism about the efficacy of "two men (Michael Polanyi and his son George Polanyi) setting forth to defend the universities of the world against all the enemies of academic freedom." He thus concluded somewhat ironically that "it seems more than doubtful that their rights can be successfully defended by a small group of self-appointed and foundation-endowed champions."<sup>26</sup> Another officer wrote to Weaver that "this type of business looks more and more political to me and I feel that the RF should withdraw from any further support."<sup>27</sup>

Interestingly, the RF's support of the CCF was imbued with ambiguities; they found its promotion of transatlantic intellectual ties and "freedom" against communism appealing, but they were worried about the seemingly dubious political position of some of the CCF members who were suspect from both sides. On the one hand, they were mostly former leftist and/or refugee intellectuals who were seen as "un-American" and untrustworthy by Joseph McCarthy and his supporters. On the other hand, people like Sidney Hook were often seen as "most notorious renegades from the radical causes"<sup>28</sup> by liberals and independent radicals who were critical of doctrinaire anti-communism. Yet, in spite of some officers' misgivings about the RF support of the CCF, Dean Rusk, in consultation with the State Department, approved the RF's support of the CCF presumably as a small investment in the interest of the "free" world which was waging a battle against communism on a cultural front.<sup>29</sup>

Clearly Nabokov and Polanyi, on their part, made use of the RF, whose name was held in high esteem in Europe for its extensive support of universities and scholars before, during and after the war. As Polanyi wrote to Weaver, "The assistance of the RF in this matter has a symbolic significance which adds to our prestige and encourages our work."<sup>30</sup> Independent of the RF's intentions, they tried to pursue their own agenda as crusaders for academic freedom and /or freedom of artistic expression. When Dean Rusk asked one of the RF's officers about his impression of the Hamburg conference, he heard a positive view that it had "created a new discipline or field of work; a new field of concern seems to be emerging out of this common

interest."<sup>31</sup>

As we have seen earlier with Willits' interest in intellectual mutants and the growth of new intellectual crops resulting from the RF's support of heterogeneous ideas, RF officers and even trustees might truly have been interested in the development of new ideas while at the same time they maintained their cold-warrior position. Apparently, these two concerns went hand in hand without any sense of contradiction or inconsistency, highlighting the subtlety of their balancing act in a politically volatile situation.

The RF's support of the CCF also came from a seemingly less political concern for the promotion of arts. In 1954, the Humanities Division supported an international conference of composers, critics and performing artists with a \$10,000 grant to the CCF. After the 1956 Hungarian Revolution, Nabokov, "concerned about the plight and prospects of able Hungarian musicians and performing artists then in Austria,"<sup>32</sup> turned to the RF for help. In 1957 the RF made a grant of \$70,000 to the CCF toward the support of Hungarian musicians and performing artists under a Program of Emergency Aid in the Arts and Sciences for Hungarian Refugees.

Toward the end of the 1950s, Nabokov persuaded the RF's Humanities Division to support a musical conference to be held in Tokyo in 1961. Entitled "the East-West Music Encounter," the conference had the ironic consequence of becoming a symbol of the East-West political rivalry when China and Russia did not participate. Nabokov told Charles Burton Fahs, Director of the Humanities Division, that "the left-wing group in Japan began attacking the meeting as a cold war undertaking."<sup>33</sup> On May 8, 1961, *Newsweek* reported that "Tokyo's first East-West Music Encounter had developed just the sort of political overtones that the festival had tried to avoid" as "Leftist critics and composers in Japan boycotted Encounter."<sup>34</sup>

Clearly, on the cold war cultural front, the 1950s became a hot season of international exchanges crossing national and cultural borders, designed and implemented by émigré intellectuals like Nabokov and Polanyi with international philanthropic organizations such as the RF supporting their experiments with a mixture of anxiety and expectation.

## **B. Economics of Competitive Coexistence**

The cold war loomed large in the minds of economists as well, and one RF- supported project was masterminded by Gerhard Colm, a German refugee scholar from the Institute of World Economics in Kiel and an original member of the University in Exile (later Graduate Faculty) of the New School for Social Research. After leaving academic life in 1939, he became a fiscal expert in the Department of Commerce, then a fiscal analyst and assistant chief in the Bureau of Budget and an economist on the Council of Economic Advisers to the Executive Office of the President from 1946 to 1952. On January 4, 1956, Colm, now the chief economist of the National Planning Association, wrote to Norman Buchanan of the RF's Social Science Division, proposing "an historical/statistical investigation of the third countries between the Soviet bloc and the free enterprise nations of the industrial West."<sup>35</sup> In 1956 the RF made a grant of \$109,250 to the National Planning Association (NPA) for a two-year study of the economics of competitive coexistence.

Colm emphasized three points in his initial correspondence with the RF and in a project proposal. The first was the urgency of such a project in "a new phase in international relationship." A draft of the press release about the RF grant tried to educate the general public about "a definite shift in the battleground of the cold war from military to economic competition between the Soviet Bloc and the Free World."<sup>36</sup>

Secondly, they emphasized that "the factual framework [was] urgently needed as a basis for making crucial policy decisions." When Leland C. De Vinney, Associate Director of the Social Science Division, showed some hesitancy in supporting "a study closely related to the advocacy of national policies on current issues," Colm tried to assure him that the "NPA's primal aim is to provide information to enable people in responsible positions in private and public life to formulate their views based on better knowledge than they otherwise would have."<sup>37</sup> Responding to De Vinney's implication that policy statements are less scientific than pure research work, Colm emphatically stated that "I deny, however, that the one or the other emphasis is more 'scientific.'" By insisting that "it is entirely feasible to bypass the value judgment implied in policy-type question," the drafters of the project emphasize the essentially value-free and scientific character of their project even if their research is closely tied to current issues.

Lastly, they pointed to the "hybrid character of our study" and tried to include in their team specialists from various disciplines: "an economist who has familiarity with the appropriate statistical techniques," "a political scientist familiar with comparative political systems and political philosophies," and an area expert, someone familiar with "the institutional aspects of the Soviet organization" or a specific country such as India or Japan.<sup>38</sup> In his 1958 letter to Buchanan, Henry G. Aubrey, an Austrian refugee scholar who started his academic apprenticeship under Adolph Lowe, then Director of the Institute of World Affairs and joined the project in the National Planning Agency in 1957, reported that he was "personally much taken with the idea of applying the theory of uncertainty to new fields."

I have even been toying with the thought of using the fundamentals of game theory in discussing situations that seem to bear a resemblance to those arising in a poker game. Inevitably in broad research many questions arise and approaches emerge in seed form to which full justice cannot be done at that time. It is one of the more tantalizing demands of my present task to let the imagination be stimulated by many impulses and yet limit the presentation to what is most relevant in terms of realistic applicability, thus leaving an amorphous residue of research that may not be the last valuable byproduct of such an undertaking.<sup>39</sup>

To some extent, such unpredictability and uncertainty about the project's direction, however exciting to path-finding scholars, seems to have worried the RF. Dean Rusk telephoned Richard Bissell, Jr. of the Central Intelligence Agency to inquire into his judgment of one member of the NPA, Theodore Geiger. After Bissell assured Rusk that he "had no doubt that Geiger was reliable and loyal," he also "promised full cooperation and assistance from that agency." The cooperation of the U.S State Department and the CIA was conveyed to Gerhard Colm, Henry G. Aubrey, and Peter G. Franck, another fiscal expert, as Buchanan's April 17, 1956 interview suggests.<sup>40</sup> In his March 9, 1956 letter to De Vinney, Colm wrote that "In the last analysis, much depends on the Foundation's confidence in the intellectual integrity of the people guiding and doing the research work."<sup>41</sup> The fact that Rusk sought the CIA's assurance about a member's reliability and Bissell's *de facto* supervision of the project make us wonder how much confidence the RF actually had in each member's integrity. The fear that its grantees might turn out to be

security risks was real in the political climate of the 1950s.

Yet, it may be argued, with their coveted assistance from the RF, Colm and his colleagues explored a new field of inquiry, a new methodological strategy, and a new avenue for cooperation between academic researchers and government officers and among scholars of different disciplines. Their scientific curiosity coupled with the cold war sentiment made them explore new possibilities in developing countries. In a way the cold war contingency gave them a niche in which they could establish themselves in the United States. It may not be fair to say that they compromised their intellectual integrity along the way, but their fact-finding research was not as pure and value-free as they had at times convinced themselves. Wittingly or unwittingly they, as economists, became part of the cold war discourse as the title of their project, namely competitive coexistence, aptly symbolizes.

At the same time, the project which resulted in Henry Aubrey's 1961 book, *Coexistence: Economic Challenge and Response*, "explored the possibilities of United States-Russian mutual adaptation long before it became entirely respectable to do so."<sup>42</sup> This elasticity might have resulted from their openness to new ideas and readiness to accept inherent complexity and the uncertainty of economic and political realities. We might even speculate that such a style of thought may have resulted from their émigré experience of being uprooted from things which are permanent and certain.

### **C. The Program in Legal & Political Philosophy (LAPP)**

Another interesting RF-supported project of the 1950s which involved both former refugee scholars and American intellectuals took place at an interdisciplinary cross-section of various disciplines such as legal studies, political science, philosophy and international relations. The list of representative books and articles by grantees under this program, compiled by Kenneth W. Thompson in November 1960,<sup>43</sup> is impressive. Included are Hannah Arendt's *The Human Condition* (1958), Herbert Marcuse's *Reason and Revolution* (1960) and Leo Strauss's *What Is Political Philosophy?* (1959), Eric Voegelin's *Order and History* (1957 and 1958), Hans J. Morgenthau's *The Purpose of American Politics* (1960), and two articles published in 1959: Hans Jonas's "Practical Uses of Theory" in *Social Research*, and Otto Kierchheimer's "Administration of Justice and the Concept of Legality in East Germany" in the *Yale Law Journal*. These contributions by established or younger refugee scholars are only part of the list, which also includes books and articles by John Rawls, Karl R. Popper, George F. Kennan, Reinhold Niebuhr, Allan Bloom, and Henry Kissinger, just to mention a few. Not only the high caliber of their scholarship but its interdisciplinary nature and the wide spectrum of ideological stances represented by these writers, pointing to 1960s radicalism as well as neo-conservatism of the 1970s, is indicative of the program's broad and eclectic character.

The July 8, 1955 RF report which reviewed this program stated its history thus: "The LAPP Program seems to have had its genesis in fairly vague comments among certain of the trustees to the effect that it might be well for the Foundation to see if something could be done in the field of morals and ethics. The difficult task of defining specific goals and discovering suitable methods of operation for the attainment of this very general end was taken up within the Foundation particularly by Joseph H. Willits."<sup>44</sup> This review also mentions that Herbert A.

Deane of Columbia University was appointed as Consultant to the Foundation in LAPP by Willits. Deane served in this capacity from September 1, 1952 to September 15, 1953.

The program and policy files, which date back to 1934, give us some insight into how "morals and ethics had been trimmed down to legal and political philosophy"<sup>45</sup> and how its orientation became more experimental and open to new ideas along the way. The intellectual and personal inclinations of Willits, who headed the division of Social Science for two decades (1939-59) and Herbert A. Deane, whose short stint at the RF was only an early episode of his long academic career, seem to have colored the nature of the program to a certain degree.

The son of a Quaker farmer with a strong concern for social justice, Willits created an innovative program as dean of the Wharton Business School before joining the RF. Deane, on the other hand, was a Brooklyn native whose ties to New York and Columbia spanned nearly four decades from his undergraduate days (the class of 1942) until his retirement in 1984. He had a long teaching career (1948-1963) followed by administrative responsibilities as vice dean and vice provost of the university. He was also the author of *The Political and Social Ideas of Saint Augustine* (1963) and *Political Ideas of Harold J. Laski* (1955), indicative of his academic interest in political philosophy and intellectual history in contrast with Willits' interest in personnel management and labor relations.<sup>46</sup>

In his October 29, 1934 memorandum for Fosdick, Willits admitted that legal research was a neglected field within the program of the social sciences. He pointed out that "the combined appropriations of the [Laura Spelman Rockefeller] Memorial and the Foundation for legal research during a seven-year period (from 1925 to 31) amounted to a little less than \$400, 000." Moreover, "since 1931 the Foundation has no grant in this field," having declined a series of requests from the Yale Law School for research in international relations and international law and the Johns Hopkins University toward the general budget of the university's Institute of Law. The RF also declined applications from the New York Law Society and the American Law Institute. It was reported that Dean Clark of the Yale Law School desperately wrote in September 1934 that "the beginnings which had been made in legal research at New Haven must shortly cease if some source of support was not discovered." Being aware of the RF's failure to meet "increased interest and activity in the field of legal research" in the mid 1930s, Willits seemed to be torn between two inclinations: the RF's past commitment to such major institutions as Yale, Johns Hopkins, Harvard, and American Law Institute, and its new opportunities for "combining a program of legal research with those interests which are now central in the program of social sciences." He also hoped that "legal research at the present time might lead to practical and far-reaching reforms."<sup>47</sup>

Presumably the onset of the Second World War made it difficult for Willits to pursue his budding interest in the field of legal research, and it was not until the spring of 1949 that Willits sent out a series of letters to the nation's legal experts, philosophers and political scientists, inquiring about "the desirability of modest efforts by the Foundation to strengthen work in the philosophy and sociology of law, and especially in connection with the relation between law and evolving ethical codes."<sup>48</sup> Willits explained that the social science division's renewed interest in legal research was triggered by "the recommendations on morals and ethics by the Trustee Review Committee and, more specifically, by Mr. Winthrop Aldrich."<sup>49</sup> Aldrich's "vague

comments" about morals and ethics made Willits go "off on one of his vague gropings,"<sup>50</sup> as he rather self-deprecatingly told his colleague, Norman S. Buchanan. More importantly, Willits shows some resistance toward "the heavy emphasis of our law schools upon the case pattern" in neglect of "legal studies that would give us a more adequate philosophy or sociology of law and therefore a better basis upon which to examine moral and ethical issues."

Reluctant to "get into the pocket of the professional law school point of view,"<sup>51</sup> Willits tenaciously explored new possibilities in the field of legal studies. He finally found a kindred spirit in Willard Hurst of the University of Wisconsin Law School. According to Bryant G. Garth, Hurst's enemies were "typically Harvard, the established names, legal philosophy and legal traditionalism," while "his allies were typically social science, detailed micro-study, and the Midwest."<sup>52</sup>

Hurst may have shared Willits' seeming dislike of upper-class Eastern institutions such as Harvard and Yale as well as his enthusiasm for investing in a new generation of scholars. Hurst and his younger Wisconsin colleague, Samuel Mermin, gave Willits two important bits of advice which seem to have led the LAPP program away from a pre-war road of supporting established large institutions into a more individualistic approach.

First, Hurst emphasized "the desirability of stressing investment not in men with established reputation, but in promising men, not yet too definitely committed to positions or affiliations." He further observed that "a nucleus of trained and motivated men" cannot be developed "without some planned effort," which Mermin described as "intelligent engineering." "The inevitable costliness of broadening men's intellectual equipment" should be accepted, Hurst exhorts, describing this as "a seed-corn sort of investment." Along with the need for a bold investment in young and unknown talents, the second point emphasized by Hurst was the need for a rather broad-based general policy advisory committee whose members should be "selected for the individual contributions of the individuals on it, and in no sense selected to represent schools of thought or particular institutions." He is also specific about the interdisciplinary nature of the committee, suggesting that it consist of "four lawyers, and two men a piece from political theory, philosophy, sociology and anthropology, and social psychology."<sup>53</sup>

Hurst's vision apparently impressed Willits, who, in turn, reformulated it in his own words in a letter to Chester I. Bernard, president of the RF. Willits emphasized that the LAPP program will provide "a great opportunity for RF to seek out and assist the growth of men with the general competence in political philosophy." Willits made use of a "rare bird" metaphor in place of Hurst's Midwestern "seed corn" metaphor when he wrote: "The good political philosopher or theorist is now a very rare bird. The species will take a long time to restore itself; there must be a long period of patient nurture. But we shall neglect the nurture to our peril."<sup>54</sup>

On May 22, 1952, Willits presented a proposal for the development of a program in legal and political philosophy and the LAPP program was officially approved. The first conference on legal and political philosophy was scheduled to be held at Arden House in Harriman, New York from October 31 to November 2, 1952.

After Herbert A. Deane of Columbia University was appointed assistant director in charge of

legal and political philosophy in September, 1952, he seems to have steered the program further away from Aldrich's traditional and WASPish concern with morals and ethics, and even from Willits' concern for educational nurturing, democracy and social justice. Deane, with his acquaintanceship with refugee scholars at Columbia and in New York in general, seemed to be more cosmopolitan and moved the direction of the LAPP program toward a "tremendous expansion of the experimental work" envisioned by Samuel Mermin.<sup>55</sup> After his pre-conference interview with Louis Hartz, Deane noted that Hartz is of the opinion that "group projects of any sort are not likely to be very productive in this field."<sup>56</sup> During the conference "testimony of such men as Franz Neumann and Louis Hartz" brought out "the fact that the most promising students in this area find it next to impossible to get the aid in the way of research scholarships and fellowships."<sup>57</sup>

In the LAPP program's early stage, Franz Neumann seems to have played an important role in championing the cause of a younger generation and providing a European perspective. He also became the first recipient of a grant under this program.<sup>58</sup> Neumann was a professor of political science at Columbia famous for his 1942 study of German totalitarianism, *Behemoth*. He was an émigré from Germany who worked as a labor lawyer before taking refuge in England and then in the U.S. He was one of the Frankfurt school scholars whose Institute of Social Research moved to Columbia University in 1934. Max Horkheimer and others went back to Germany in 1950 while Neumann, Marcuse, and Kierchheimer remained in the U.S. Deane seems to have found émigré scholars like Neumann valuable, as he specifically reported the favorable comments of Herbert L. A. Hart of Oxford University concerning Neumann and W. Friedman of Toronto University:

Friedman and Neumann were quite different from their American colleagues. Their statements tended to be more general and positive and sometimes were dogmatic and needed further discussion and modification. But both had the virtue of clarity and of a deep concern for ideas and their importance. From many of the Americans, on the other hand, one got the impression that ideas and reflections upon them are not really serious or respectable pursuits.<sup>59</sup>

Apparently this quality of taking ideas seriously was something which was very appealing to Deane and he seems to have found such a quality crystallized in an émigré scholar like Neumann. In an essay included in *The Cultural Migration*, Neumann tells us that "the U.S. appeared as the sole country where, perhaps, an attempt would be successful to carry out the threefold transition: as a human being, as an intellectual, and a political scholar."<sup>60</sup> Although Neumann's early death in 1954 thwarted such high expectations, his former student, Kenneth Neal Waltz, in his preface to *Man, the State, and War: A Theoretical Analysis*, says that Neumann's "brilliance and excellence as a teacher can never be forgotten by those who knew him."<sup>61</sup> Perhaps the young Deane -- a Ph.D. candidate at Columbia University at the time of his service<sup>62</sup> -- shared the émigré scholar's love of ideas.

In a memorandum after the conference, Deane reported that "it is fair to say that with a few exceptions -- largely the men with a non-American background -- the members of the group gave a negative answer" to Walter Stewart's simple question at the first session: "Do we really believe in the importance of general ideas?" Deane's tone is almost that of the American jeremiad, deploring "this lack of philosophic temper and intellectual power in our society," "increasing intellectual and social specialization and technical complexity," and "this failure of general analysis and understanding."<sup>63</sup> What he is up against is not necessarily the "ever-increasing

power of social scientific approaches to the study of politics,"<sup>64</sup> as Emily Hauptmann suggests. It seems to me that Deane was deploring something that Richard Hofstadter later termed "anti-intellectualism" in American life. In his second memorandum, he sums up what he expects from the RF and its program:

In a period when tremendous sums of money are being poured into scientific research in the field of human behavior by many organizations, my only plea is that RF have the imagination and the courage to devote a small fraction of the funds available to DSS to the area of social philosophy, so that the quality of men may be improved, significant work supported, and the prestige of these studies increased. Particularly in American society, where the natural bent is toward that which is practical, concrete, and immediate, there is a great need for RF action to encourage the development of that which is theoretical, general, and long-run.<sup>65</sup>

Although Deane's propensity was toward the "theoretical, general and long-run," he also qualifies his statement by suggesting that he had no intention to propose that the "RF should abandon or curtail its efforts to promote the development of scientific studies of human behavior and social relations."

Instead he emphasized that "the dichotomy -- science vs. philosophy -- is, in my opinion, sterile, vicious, and outmoded."<sup>66</sup> Here Deane echoes Neumann's plea to Willits: "Then it would be my great wish, if in the elaboration of the program, this very dangerous dichotomy between theory and empiricism could be avoided."<sup>67</sup> When he asserts that "the verification of a political theory in political reality is still, in my view, the most vital concern of political theory," Neumann was mindful of what happened in Germany as he earlier reflected on how "political ideas assume power only in a completely distorted form."<sup>68</sup> Elsewhere Neumann wrote that "the role of the social scientist is the reconciliation of theory and practice, and that such reconciliation demands concern with and analysis of the brutal facts of life. This deepened understanding of the role of social and political scientists, this the United States has given me."<sup>69</sup>

Maybe as a warning to American intellectuals becoming too critical of their own intellectual heritage from which he felt that he learned a lot, Neumann tells Deane, "you probably underestimate the amount of work done in political theory in the United States in contrast to all other countries." He reminds him that "research projects in political theory appear in many disguises," in "the classics, languages, history, and political science."<sup>70</sup> To establish a narrow discipline of political philosophy or legal philosophy in universities was something Neumann wanted to avoid, and Deane probably shared this view. Apparently Deane felt that émigré scholars who had witnessed the powerlessness of pure speculation in a crisis situation were better equipped with the art of unifying analytical skills with a firm grasp of what is happening.

Perhaps this is why Deane, in his memorandum to Willits, recommended Hannah Arendt as one of "men and women outside of academic life who have demonstrated a concern for general ideas and who, if given some free time, might make important contributions to basic thinking about legal and political problems."<sup>71</sup> He later described Arendt as "the most perceptive and gifted writer on political philosophy." In what would become his last extensive memorandum, he also recommended Leo Strauss at Chicago, Franz Neumann at Columbia, and Herbert Marcuse as "probably the most distinguished among the mature men now actively engaged in political philosophy."<sup>72</sup>

In addition to Arendt (a 1956 LAPP grantee, studying the relationships in political theory among politics, society and work)<sup>73</sup> and Marcuse (1959, cultural changes in contemporary industrial society)<sup>74</sup>, such refugee scholars as Otto Kirchheimer (1956, political justice)<sup>75</sup> and Hans Jonas (1959, Gnosticism and its relation to the history of political thought)<sup>76</sup> were awarded fellowships under the LAPP. Another refugee scholar who had close ties with this program was Hans J. Morgenthau, director of the Center for the Study of American Foreign Policy at Chicago. Morgenthau practiced law in Frankfurt between 1927 and 1932 before coming to the U.S. and teaching at the University of Kansas while studying American law in order to be admitted to the bar in the U.S. A good friend of Kenneth Thompson, who succeeded Willits as director of the RF's Social Science Division, Morgenthau became a liaison between legal studies and international relations. In his December 28, 1953 memorandum to Willits, Thompson wrote: The serious critics of the current interpretations given to the place of the national interest in foreign policy include scholars like Reinhold Niebuhr, Arnold Wolfers, Sterling professor of International Relations at Yale, and Dorothy Fosdick. If three such scholars could meet with Morgenthau and/or Kennan, much soul-searching would result providing discussions went on over a period of time so definition of concepts and time for reflection was made possible.<sup>77</sup> Thompson asked Morgenthau to serve as a member of the RF's Advisory Committee in LAPP from 1957-1959, and he also served as a member of its Advisory Committee in International Relations in 1961.

In the field of international relations and international law, refugee scholars were prominent, and Thompson seems to have built up an informal circle of both refugee scholars and American intellectuals by using RF-assisted conferences and seminars as a kind of clearing house for this diverse and interdisciplinary group. In 1960, with Thompson's initiative, a new project on international relations was implemented following the pattern established by the LAPP. The program began in 1952 and concluded in 1962, with the RF having "appropriated approximately \$833,000 in support of research by individual scholars in the fields of legal and political philosophy."<sup>78</sup>

**Conclusion** Hugh Wilford, discussing the RF's support of the *Partisan Review* in his book *The New York Intellectuals: From Vanguard to Institution*, poses a difficult question: "Are thoughts organically formed? Is it possible to control or manipulate thoughts externally to make them fit into the goals of organizations such as foundations?"<sup>79</sup> The archival material I examined with a special focus on refugee scholars and American intellectuals in the 1950s does not yield a ready answer to this question.

The RF's ideological position on the whole might be placed within the general range of Cold War liberal consensus. Its support of CCF and a project like "economics of competitive existence" cannot be wholly understood without considering the cultural politics of the Cold War. On the other hand, the origins and motives which supported a project like the LAPP are more complex, as it reflects different and often contradicting views and motives of the RF's successive presidents, trustees, officers, academic consultants and grantees. One of the ironies of the situation in the LAPP program is that quite a few refugee scholars who are fiercely

independent and anti-establishment, and un-orthodox in their thinking were recruited into a program whose original concern with morality and ethics was WASPish and imbued with evangelical reformism.

Is it possible to argue that the kind of mutants produced through the cross-fertilization that Willits envisioned were not only interdisciplinary variants but also ideological ones? Did the RF want to see the U.S. Anglo-Saxon legal, political and social heritage which was challenged by different ideological sources during and after the Second World War strengthened by European intellectual heritages with their stronger theoretical footings? And indeed, was the kind of cold-war consensus formed in the 1950s a product of such cross-fertilization? Or if thoughts are organically evolved and could not be engineered by governmental organizations or private foundations, the intellectual consequences of grant-giving activities would be unpredictable, and any pattern we might try to see in grantees' intellectual output would be purely accidental and fortuitous. Again there is no ready answer.

It is possible to speculate that refugee scholars' émigré experience of surviving in a relatively uncertain situation made them particularly responsive to the fluidity of the international situation and motivated them to pursue a new path in their academic inquiry. Just as they crossed national, linguistic, and cultural borders in their personal lives, they crossed disciplinary borders and sometimes ideological borders easily. To borrow a term used by material science experts, they might have been equipped with some quality akin to "transformation induced plasticity."

Furthermore, the kind of émigré network that developed among the refugee scholars and their connection with the establishment through their wartime involvement in governmental agencies and private foundations might have made them a more cohesive group than has been previously assumed. In some sense during the Cold War many refugee scholars came to their academic maturity and transformed themselves from "refugee scholars" into American scholars or rather cosmopolitan scholars. Lone wolves became more institutionalized and the Rockefeller Foundation, wittingly or unwittingly, seems to have played a part in this process.

From the point of view of intellectual history, in terms of the history of ideas and the history of intellectuals, the refugee scholars' prominence in the academic world as well as their impact on American ideological currents, ranging from radicalism to neo-conservatism, is a challenging theme. Yet, a further investigation of the RAC's resources might give us insight into such an inquiry.
